The Smart-Ship way

Control Levers with Haptic Feedback

Sustainable

- Fuel Savings
- Increased Safety
- Decreased OPEX

Future-proof

- Insight in Operator Performance
- Enabling Electrification & Green Shipping
- Remote & Semi-Autonomous Ready

Customisable

- Programmable LED indicators
- Unlimited haptic functionalities
- Custom branding

At **Smart-Ship**, we implement force-feedback technology on maritime controls to enable safe, sustainable, and efficient operations. Our technology increases the operators' situational awareness, leading to safer operations and fuel savings due to optimal use of energy and fuel on board, while keeping the operator in full control.

Already realised on:

Enabling zero-emission shipping

Enabling remote-controlled sailing

Enabling sustainable yachting

Send us your challenge!
